

Eyes ^{OF} THE World ^{ON} JACKSONVILLE

Jacksonville is becoming a vision destination for the world, thanks to the efforts and expertise of Arun C. Gulani, M.D., M.S., and the Gulani Vision Institute (GVI). With a vision for the world, Dr. Gulani is improving and restoring vision for patients around the globe through direct treatment, training other eye surgeons and developing new instruments and techniques that are revolutionizing vision health.

Dr. Gulani is the founding director of the newly opened Gulani Vision Institute. A world class service in a world class ambience.

He is former chief of the cornea and laser vision service as well as assistant professor at the University of Florida School of Medicine in Jacksonville.

He enjoys a national reputation with world renown based on his innovations and contributions to the science, technology and art of eye surgery.

Dr. Gulani's influence on the vision health of patients around the world is three-fold. Primarily, Dr. Gulani is known worldwide for his direct treatment of a myriad of vision corrective disorders (Myopia-nearsightedness, Hyperopia- farsightedness and Astigmatism). He is in demand around the world to train others eye surgeons in the techniques and procedures he has pioneered. And, he continues to invent new instruments and refine existing technology.

"I have a passion to help people see," said Dr. Gulani. He performs nearly 20 different procedures to decrease dependence on eyeglasses so he likes to

educate his patients about which technology may be best for them.

Dr. Gulani is an acknowledged leader in laser vision correction (LASIK) for refractive errors such as myopia (nearsightedness), hyperopia (farsightedness) and astigmatism (asymmetric curvature of the cornea). But Dr. Gulani's expertise reaches far beyond the normal range of laser vision surgeries with his advanced corneal surgical skills (LASIK is a corneal surgery). He was among a few in the entire world to be selected to perform the futuristic Artificial corneal transplant surgery, and infact was the first in Florida to do so.

The second aspect of Dr. Gulani's vision for improved eye care for the world is the training he provides. It is a common sight to see industry leaders, scientists and eye surgeons visit with Dr. Gulani to learn new techniques and gain insight for future technology. Currently two eye surgeons have traveled across the globe to study advanced LASIK surgery at the Gulani Vision Institute. Having recently returned from teaching in California at the National meeting for eye surgeons he is scheduled to teach in Paris this Fall, followed by Australia and Asia later this year.

The third aspect of Dr. Gulani's vision lies in his innovations and future directions that makes him a

sought after consultant to the eye care industry itself.

Dr. Gulani has invented more than 50 instruments for LASIK and other types of eye surgery and received numerous awards for the same.

His published works have had a noteworthy influence on the field of ophthalmology. He has written textbook chapters, original articles for professional journals, serves on peer-review boards and has been invited to make presentations to prestigious professional conferences around the world. He has international privileges and is highly respected in his field. It is common for local patients at GVI to be sit-

- Dr. Gulani

ting next to patients who have flown in from major cities like New York and California to seek Dr. Gulani's opinion and surgery.

With all his accomplishments and recognition, Dr. Gulani remains imminently approachable. When you need eye care, Dr. Gulani personally takes the time to educate you about all aspects of your care and treatment. His caring style and full attention to your vision are the foundation of his practice - a practice that spans the globe but resides here in Jacksonville.

Vision for the WORLD

Being a physician, I did extensive medical research to select Dr. Gulani for my LASIK. In the role of a patient, I was impressed with the combination of his extensive knowledge, confidence and yet personable approach. - S.A., M.D.

I had Lasik elsewhere with an inadequate result. I approached Dr. Gulani who methodically corrected me to 20/20 vision. He is indeed a Doctor's doctor. - P.C., M.D.

As a Navy Pilot, my vision is very important to me and I wanted the best LASIK surgeon I could find. Dr. Gulani is truly the best. - J.C.

Having been an eye surgical nurse for over 30 years, I personally traveled to witness Dr. Gulani perform complex corneal surgeries successfully. I was confident that if any complication were to arise, Dr. Gulani had the ability to fix it and recommended him for my husband's LASIK. - C.M.

I had a corneal disease and glasses too. Dr. Gulani selected a special Laser vision surgery to correct them both simultaneously. - C.F.

Thanks to Dr. Gulani and his commitment to advanced eye surgery at 70 I can see again. - C.D. (Artificial Corneal Transplant)

We have traveled from across the globe to Jacksonville to study under Dr. Gulani and learn his Lasik techniques and advanced vision corrective procedures. He is a rare combination of an excellent surgeon, a great teacher and a caring physician. - C.J, M.D. & A.P, M.D.
