Wavefront Optimized Refraction

Refining the Art of Refraction

XFRACTIONSM process uses the multi-functional OPD-Scan III aberrometer/corneal analyzer and the TRS-5100 digital refractor. Save time, while receiving more information about each patient's total visual system for superior diagnostics and surgical results.

"The OPD-Scan III is helping us understand angle kappa, spherical asphericity and document where the toric lens is sitting. This amazing technology can also calculate for previous refractive surgery patients needing cataract surgery. Unhappy patients may come in and say, 'My doctor did great surgery but I cannot see well.' With the OPD, I can now tell my patients this is your cause and here is the direction we need to take. We become a team."
